

# Freddy Fish™

Out of the dark depths of your disk drive comes Freddy Fish, gobbling little fish as he goes. The more he gobbles the bigger he gets. But will he grow big enough to attack his enemies and rescue his friends?

He'll be chased by sharks and barracudas, shot at by harpoon toting frogmen, and nasty nets from above drop from time to time.

Freddy Fish is a game of strategy, dexterity and skill. When it comes to choosing great games for your IBM PC, don't let Freddy Fish be the one that gets away!

## Special features include:

**Color Graphics** - Full color graphics are used for high quality state-of-the-art software.

**Players** - Up to four players can play Freddy Fish.

**Difficulty Levels** - There are four difficulty levels from which to choose. Each will challenge you to master the game.

**Sound** - Anytime during the game you may turn the sound on or off.

**Joystick/Keyboard** - You may choose to use either a joystick or the keyboard. Furthermore, during the game you can change back and forth.

**Redefinable Keyboard** - Keys are initially assigned to perform certain game functions. These keys can be redefined as you so desire.

**Pause** - You have the ability to stop the game and then continue at any time.

**Fast-Action** - Assembler written for fast play action.

**Restart** - Anytime during game play you may stop the game and start over.

**High Scores and Names** - The ten highest scores along with the players' names are saved to the disk.

## Hardware Requirements:

Freddy Fish requires at least 64K and a single- or double-sided disk drive. A color graphics adapter is necessary and a color monitor is also suggested. No operating system (DOS disk) is needed.
